## Colleges & Universities

RoboFest  
2012

Sunday, October 14

# ***New Jersey Institute of Technology*** **STUDENT PROJECTS**

**NJIT was one of the first Universities to support the inaugural RoboFest in 2010. They populated three booths with some very interesting technology at time. We look forward to this year's presentation.**

**Among the exhibits will be a "Design Well" which has been developed by one of the students.**

**In addition to the SAE Car teams, the Civil Engineering Steel Bridge and Concrete Canoe teams may be making an appearance. Not robotics, but very interesting technology and a great application of Materials Science.**

**We hoping that the Biomedical Engineering department will once again bring one of their very interesting exhibits ...showing the application of technology to improve the human condition. The previous exhibit was quite impressive.**

**More specifics will be posted here as they are received. If the NJIT exhibit is anything like last time, it is worth waiting for. Anticipating a great showing!**
